NARTech

Position Title: ASP.NET Developer

Job Description

NARTech, Inc. is currently seeking an **ASP.NET Developer** to join our growing company. We are a small business, appraised at CMMI Level 5.

We currently have an open position for an experienced **ASP.NET Developer** with a strong background in building scalable, reliable and high-performance web applications using the Microsoft stack. Responsible for building and maintaining internal and external web-facing applications, the developer will be working with a team of experienced analysts, developers and business resources in order to build enterprise systems that support mission objectives.

We are looking for a dynamic, talented application developer who is ready for a challenge where teamwork, technical ability, client interaction, and problem-solving skills are essential.

Work must be performed on-site at the client location in Washington, DC. Client is located near a DC Metro station.

Must be a U.S. Citizen or Green Card holder to apply.

Responsibilities

- Interfacing with the user(s) and sponsor(s) and all other stakeholders in order to determine their (evolving) needs.
- Generating the highest level of application development work products, based on the user's needs and other constraints such as cost and schedule.
- Ensuring that this set of high level work products are consistent, complete, correct, and operationally defined.
- Interfacing with the design and implementation engineers so that any problems arising during design or implementation can be resolved in accordance with the fundamental architectural concepts, and user needs and constraints.
- Generating a set of acceptance test requirements which determine that all of the high level requirements have been met.
- Generating products such as models, diagrams, and prototypes to keep the user and the engineers constantly up to date and in agreement on the system to be provided as it is evolving.

Skills

We require the following skills:

- More than five (5) years of progressive .NET development experience
- MCSD or MCPD certification required within 6 months from start date
- Minimum of two (2) years of experience with Active Directory for system and security integration (Kerberos).
- Minimum of three (3) years of experience of Extensible Markup Language (XML), XML Schema (XSD) and Extensible Stylesheet Language Transformations (XSLT). Such knowledge shall include but not limited to:
    - Creating new schemas and style sheets
    - Reviewing, modifying, and enhancing existing schemas and style sheets
- Minimum of four (4) years of progressive experience with Microsoft SQL Server. Ideally, experience should also include SQL Server 2008 version and database normalization processes.
- Minimum of three (3) years' experience with WEB Services, Web Distributed Authoring and Versioning (WebDAV), and the implementation of these services.
- Minimum of two (2) years' experience with HTML/HTML 5, CSS/CSS3, and JQuery/Java Script. .NET development is desired.

- Possess the ability to perform complex analysis, design, and development tasks Independently with minimal direction and guidance
- Possess the ability to provide direction and guidance to less experienced application developers as required

Experience	More than five (5) years of progressive .NET development experience and at least one Certificate as a Microsoft Systems Developer or a Microsoft Certified Professional Developer (MCSD or MCPD). MCPD is preferred as it is the current certification from Microsoft. This certification can be obtained no later than six (6) months from an application developer's start date.
Requirements	B. S. degree in Computer Science or similar degree is preferred
