

Job Description

Job Description: NARTech, Inc. is currently seeking a full-time Technology Consultant with in-depth .NET development experience to join our growing company. Named as a Washington Technology “Fast 50 Government Contractor”, we are a small business, appraised at CMMI Level 4.

Seeking an experienced .NET developer with a strong background in building scalable, reliable and high-performance web applications using the Microsoft stack. Responsible for building and maintaining internal and external web-facing applications, the developer will be working with a team of experienced analysts, developers and business resources in order to build enterprise systems that support mission objectives.

We are looking for a dynamic, talented application developer who is ready for a challenge where teamwork, technical ability, client interaction, and problem-solving skills are essential.

Qualification Requirements:

- B. S. degree in Computer Science Application Development, Information Management or in a related IT field.
- Must have 10+ years of overall full systems development lifecycle experience including 8+ years of software development experience, and 5+ years of .NET development experience.
- At least one certificate as a Microsoft Certified Solutions Developer or a Microsoft Certified Professional Developer (MCS D or MCPD). MCPD is preferred as it is the current certification from Microsoft.
- Have a minimum of two (2) years of experience with Active Directory for system and security integration (Kerberos).
- Have a minimum of three (3) years of experience of Extensible Markup Language (XML), XML Schema (XSD) and Extensible Stylesheet Language Transformations (XSLT). Such knowledge shall include but not limited to:
 - Creating new schemas and style sheets
 - Reviewing, modifying, and enhancing existing schemas and style sheets
- Have a minimum of four (4) years of progressive experience with Microsoft SQL Server. Ideally, experience should also include SQL Server 2008 version and database normalization processes. Such knowledge must include but are not limited to:
 - • Stored Procedures
 - • User Defined Functions
 - • Security
 - • Views
 - • Table Structures
 - • Primary and Foreign Keys
 - • Database Integrity processes
 - • Reporting Services
- Have a minimum of three (3) years' experience with WEB Services, Web Distributed Authoring and Versioning (WebDAV), and the implementation of these services.
- • Have a minimum of two (2) years' experience with HTML/HTML 5, CSS/CSS3, jQuery/Java Script, ASP.Net, Visual Basic, and SharePoint 2010/2013 development with Microsoft Visual Studio
- Experience with technologies/tools listed below in the Skills section is a must.

Skills Requirements:

- Excellent design and development skills
-

- Expertise with ASP.NET, JQuery, JavaScript, Web Services, Visual Studio
- Sound understanding of relational databases and SQL, including experience with Microsoft SQL Server (Oracle is a plus).
- Strong experience designing / developing with n-tier architectures (UI, Business Logic Layer, Data Access Layer)
- Solid knowledge and understanding of OOP software concepts, design patterns, and best practices
- Ability to adapt quickly to an existing, complex environment and learn new concepts / software technologies as needs arise
- Possess the ability to provide direction and guidance to less experienced application developers as required
- Strong problem-solving and analytical skills.
- Self-motivated, independent, detail oriented, and a responsible team-player
- The ability to communicate effectively - both verbally and in writing.

Responsibilities:

- Interfacing with the user(s) and sponsor(s) and all other stakeholders in order to determine their (evolving) needs.
- Generating the highest level of application development work products, based on the user's needs and other constraints such as cost and schedule.
- Ensuring that this set of high level work products are consistent, complete, correct, and operationally defined.
- Interfacing with the design and implementation engineers so that any problems arising during design or implementation can be resolved in accordance with the fundamental architectural concepts, and user needs and constraints.
- Generating a set of acceptance test requirements, together with the designers, test engineers, and the user, which determine that all of the high level requirements have been met.
- Generating products such as models, diagrams, and prototypes to keep the user and the engineers constantly up to date and in agreement on the system to be provided as it is evolving.
